

Rayat Shikshan Sanstha's
Yashavantrao Chavan Institute of Science, Satara
Syllabus for Master of Science Part II

1. Title: **M.Sc. Biotechnology (Entire)**

2. Year of Implementation: 2022-23

3. General Objectives:

- Construction and designing of the courses to suite industrial needs.
- More emphasis on applied aspects of biotechnology
- To develop aptitude of students in the field of research.
- Enrichment of basic knowledge in areas of Biotechnology

4. Duration: One Year

5. Pattern: Semester wise

6. Medium of Instruction: English

7. Structure of Course:

a. Semester III :

Theory: 04 Papers

Practical's: 02 Papers

b. Semester IV :

Theory: 04 Papers

Practical's: 02 Paper

8. Structure of Course:

YASHAVANTRAO CHAVAN INSTITUTE OF SCIENCE, SATARA									
COURSE STRUCTURE UNDER CHOICE BASED CREDIT SYSTEM (CBCS)									
M. Sc. BIOTECHNOLOGY (ENTIRE)									
M. Sc. II SEMESTER– III (Duration – 6 Months)									
Sr. No.	SUBJECT CODE	PAPER NO AND TITEL	TEACHING SCHEME						
			Theory			Practical			
			No. of lectures	Hours	Credits	Subject	No. of lectures	Hours	Credits
1	MBTT--301	Bioprocess and Fermentation Technology	4	5	4	MBTP--305 : Bioprocess and Fermentation Technology & Enzymology	5	5	4
2	MBTT--302	Enzymology	4	5	4				
3	MBTT--303	Genetic Engineering	4	5	4	MBTP--306 : Genetic Engineering and Biostatistics / Bioinformatics	5	5	4
4	MBTT-304 A	Bioinformatics	4	5	4				
5	MBTT 304 B	Biostatistics							
Total of SEM III			16	20	16		10	10	08

YASHAVANTRAO CHAVAN INSTITUTE OF SCIENCE, SATARA
COURSE STRUCTURE UNDER CHOICE BASED CREDIT SYSTEM (CBCS)

M. Sc. BIOTECHNOLOGY (ENTIRE)

M. Sc. II SEMESTER– IV (Duration – 6 Months)

Sr. No.	SUBJECT CODE	PAPER NO AND TITEL	TEACHING SCHEME						
			Theory			Practical			
			No. of lectures	Hours	Credits	Subject	No. of lectures	Hours	Credits
1	MBTT--401	Genomics and Proteomics	4	5	4	MBTP--405: Project	5	5	4
2	MBTT--402	Research Methodology	4	5	4				
3	MBTT--403	Bio-entrepreneurship and IPR	4	5	4	MBTP--406: Internship	5	5	4
4	MBTT--404 A	Animal Biotechnology	4	5	4				
5	MBTT--404 B	Food Biotechnology							
Total of SEM IV			16	20	16		10	10	8

SEMESTER III

SUBJECT CODE	PAPER NO AND TITEL
MBTT-301	Bioprocess and Fermentation Technology
MBTT-302	Enzymology
MBTT-303	Genetic Engineering
MBTT-304 A	Bioinformatics
MBTT-304 B	Biostatistics
MBTP-305	Bioprocess and Fermentation Technology & Enzymology
MBTP-306	Genetic Engineering and Biostatistics / Bioinformatics

SEMESTER III

MBTT 301: Bioprocess & Fermentation Technology

Course Objectives: Student will able to:-

1. study operation & design aspects of different bioreactors.
2. understand knowledge about roles of different media sources, various techniques of optimization of media as well as digital monitoring of fermentation processes.
3. study concepts of primary & secondary metabolic product processes & also various analytical & preparative techniques of recovery of products obtained in these processes.
4. Understand the techniques & knowledge in understanding the production processes of various industrial scale fermentation.

Credits=4	SEMESTER-III MBTT 301: Bioprocess & Fermentation Technology	No. of hours per unit/ credits
Credit –I UNIT I	Introduction to fermentation and Basic aspects of bioengineering	(15)
	A) Introduction to fermentation, B) Type of fermentation– Batch, Fed Batch and Continuous processes. C) Basic Design of fermentor D) Design aspect of Stirred tank reactor E) Design aspect of non- mechanically agitated bioreactors (Air lift and Bubble column). F) Design and operation of immobilized cell reactors. (Packed Bed Reactor) G) Mass transfer, Aeration and agitation of fermentation broth.	
Credit –1 UNIT II	Fermentation Media, Sterilization and monitoring of process variables	(15)
	A) Media components C, N, P and their optimization, B) Sterilization of media: Kinetics of destruction of microorganisms C) Indicator organism Del factor, D) Designs of Batch and continuous sterilization E) Equipment used in filter sterilization.	

	<p>F) Monitoring of process variables:</p> <ul style="list-style-type: none"> i. Types of sensors, ii. Measurement and control of various parameters (pH, Temperature, dissolved oxygen, microbial biomass, inlet and exit gases, fluid flow, Pressure, Foam), iii. Scale Up and Scale Down 	
Credit –1 UNIT III	Production and downstream processing	(15)
	<ul style="list-style-type: none"> A) Concept of primary (growth associated) and secondary metabolites (Growth non -associated) metabolites, B) Kinetics of growth and product formation. Yield coefficient and efficiency. C) Downstream processing and unit operations, General strategy of downstream processing, Production, recovery (with principles of techniques involved). D) Effluent Disposal strategies used for Textile, dye, dairy, paper and pulp industries, E) Fermentation economics. 	
Credit –1 UNIT IV	Fermentation Products	(15)
	<ul style="list-style-type: none"> A) Large scale Production processes B) Wine, beer, Cheese, Xanthan gum, Lactic acid, Bread, Citric acid, Antibiotics (Penicillin) C) Fermentative product of Vitamins (Vitamin C), Amino acids (glutamic acid, lysine), D) Enzymes (glucose oxidase, amylase), E) Organic acids (citric acid), F) Biotransformation product (steroid). 	

Course Outcomes: Student should be able to:-

1. Design of fermentor/ bioreactors
2. Design & optimize fermentation media
3. Scale up of fermentation process for large scale
4. understand Different fermentation processes for diverse industrial products

SEMESTER III**MBTT 302: ENZYMOLOGY****Objectives:**

Students will be able to

1. learn enzymes and their kinetics.
2. understand the structure-function relationship of enzyme.
3. understand the concept of enzyme immobilization.
4. understand the role of enzymes in industry and diagnostics.

Credits=4	SEMESTER-III MBTT 302: ENZYMOLOGY	No. of hours per unit/ credits
Credit –I UNIT I	Enzymes	(15)
	A) Classification - IUB system, rationale, overview and specific examples. B) Characteristics of enzymes, enzyme substrate complex. Concept of active centre, binding sites, stereospecificity and ES complex formation. Effect of temperature, pH and substrate concentration on reaction rate. C) Activation energy. Transition state theory. Enzyme activity, international units, specific activity, turnover number, end point kinetic assay, Factors affecting catalytic efficiency - proximity and orientation effects, distortion or strain, acid - base and nucleophilic catalysis. D) Methods for studying fast reactions. Chemical modification of enzymes. Isoenzymes and multiple forms of enzymes	
Credit –I UNIT II	Enzyme Kinetics	(15)
	A) Michaelis - Menten Equation - form and derivation, steady state enzyme kinetics. Significance of Vmax and Km. B) Bisubstrate reactions. C) Graphical procedures in enzymology - advantages and disadvantages of alternate plotting. D) Enzyme inhibition - types of inhibitors - competitive, noncompetitive and uncompetitive, their mode of action and experimental determination.	
Credit –1 UNIT III	Structure-function relations	(15)

	<p>A) Amylase, Protease (trypsin), Lysozyme, ribonuclease, carboxypeptidase, Multi enzyme complexes - pyruvate dehydrogenase.</p> <p>B) Protein ligand binding, including measurements, analysis of binding isotherms, co-operativity</p> <p>C) Hill and Scatchard plots and kinetics of allosteric enzymes.</p> <p>D) Product inhibition, feedback control, enzyme induction and repression.</p>	
Credit –1 UNIT IV	Immobilized enzymes	(15)
	<p>A) Relative practical and economic advantage for industrial use, effect of partition on kinetics and performance with particular emphasis on charge and hydrophobicity (pH, temperature and K_m).</p> <p>B) Various methods of immobilization - ionic bonding, adsorption, covalent bonding (based on R groups of amino acids), microencapsulation and gel entrapment.</p> <p>C) Immobilized multienzyme systems.</p> <p>D) Biosensors - glucose oxidase, cholesterol oxidase, urease and antibodies as biosensors</p>	

Course Outcomes: Student should be able to

1. understand the importance and implementation of enzyme kinetics
2. understand structure-function relations of enzymes
3. apply Immobilized Enzyme in the industry
4. apply the gained knowledge in enzyme based clinical diagnosis

6. Guisan, J. *Immobilization of enzyme & cells*, Humana, 3rd edition (2013) – Unit IV

SEMESTER III**MBTT 303: GENETIC ENGINEERING****Objectives:**

Student will able to:-

- study microscopic analysis of DNA structure.
- Study concept of designing and construction of vector
- Understand PCR, its type and designing of primer
- Apply the PCR technique in different areas.

Credits=4	SEMESTER-III MBTT 303: GENTETIC ENGINEERING	No. of hours per unit/ credits
Credit –I UNIT I	DNA & Basics of Recombinant DNA Technology	(15)
	<p>A) Introduction to DNA structures, Enzymes used in rDNA technology, Modification systems, Type II restriction endonucleases and properties, isoschizomers and neoschizomers, Cohesive and blunt end ligation, linkers, adaptors, homopolymeric tailing.</p> <p>B) Labeling of DNA: Nick translation, random priming, radioactive and non-radioactive probes, use of Klenow enzyme, T4 DNA polymerase, bacterial alkaline phosphatase, polynucleotide kinase, ligase, nuclease, Reverse transcriptase.</p> <p>C) Hybridization techniques: Northern, Southern and Colony hybridization, Fluorescence in situ hybridization, Restriction maps and mapping techniques, DNA fingerprinting, chromosome walking & chromosome jumping</p>	
Credit –I UNIT II	Cloning Vectors	(15)
	<p>A) Gene Cloning Vectors: Plasmids, bacteriophages, Cloning in M13 mp vectors, phagemids, Lambda vectors; insertion and replacement vectors, Cosmid vectors, TA and pGMT vector</p> <p>B) Artificial chromosome vectors (YACs, BACs), Animal Virus derived vectors- SV-40, vaccinia/bacculo & retroviral vectors.</p> <p>C) Expression vectors; pMal, GST, pET-based vectors. Viral vectors</p>	
Credit –1 UNIT III	Cloning Methodologies	(15)
	A) Insertion of Foreign DNA into Host Cells: Transformation, Transfection: Chemical and physical methods, liposomes,	

	<p>microinjection, macroinjection, electroporation, biolistics, somatic cell fusion, gene transfer by pronuclear microinjection.</p> <p>B) Cloning and expression in yeasts (<i>Saccharomyces</i>), animal and plants cells, methods of selection and screening, cDNA and genomic cloning, expression cloning, jumping and hopping libraries, southwestern and far western cloning, yeast two hybrid system, phage display, Construction of cDNA libraries in plasmids and screening methodologies,</p> <p>C) Construction of cDNA and genomic DNA libraries in lambda vector. Principles in maximizing gene expression, Site-directed mutagenesis.</p>	
Credit –1 UNIT IV	PCR and Its Applications	(15)
	<p>A) Primer design, Fidelity of thermostable enzymes, DNA polymerases, real time PCR, cloning of PCR products, T-vectors, proof reading enzymes, PCR in gene recombination, deletion, addition, overlap extension, and SOEing, site specific mutagenesis, PCR in molecular diagnostics, viral and bacterial detection,</p> <p>B) PCR based mutagenesis. Applications, Sequencing methods, principle of automated DNA sequencing, RNA sequencing.</p> <p>C) Gene silencing techniques: Introduction to siRNA and siRNA technology, micro RNA, construction of siRNA vectors, principle and application of gene silencing.</p> <p>D) Gene Therapy: germ-line therapy in vivo and ex-vivo, suicide gene therapy, gene replacement, gene targeting</p>	

Learning outcome:

Student should be able to -

1. Understand Various natural and laboratory-based modification of DNA
2. understand The mechanism of DNA damage.
3. Use Tools creating DNA constructs
4. Apply Various protein expression strategies

SEMESTER III**MBTT 304 A: BIOINFORMATICS****Objective:****Student will be able to**

- study about various bioinformatics tools and techniques
- Understand Concepts of various databases and various methods
- Understand how to use bioinformatics tools for the analysis of the biological experimental data.
- Understand Sequencing techniques and gene annotation

Credits=4	SEMESTER-III MBTT 304 A: BIOINFORMATICS	No. of hours per unit/ credits
Credit –I UNIT I	Introduction to Bioinformatics	(15)
	<p>A) Bioinformatics: Introduction and definition, History, Scope and Applications. Introduction to Unix and Linux systems and basic commands</p> <p>B) Database concepts: Protein and nucleic acid databases, NCBI; publicly available tools; resources at EBI; resources on web; database mining tools, submitting DNA protein sequence to databases: where and how to submit, SEQUIN</p> <p>C) Protein sequence databases:</p> <ul style="list-style-type: none"> • Primary protein sequence databases: SWISS-PROT, PIR, MIPS, NRL-3D, TrEMBL. • Secondary protein sequence databases: PROSITE, PROFILE, PRINT, pfam, BLOCK, IDENTIFY. <p>D) Structural databases: PDB, MMDB, CATH, SCOP, PdbSum.</p> <p>E) Literature database: PubMed, PubMed Central.</p>	
Credit –I UNIT II	Structural Bioinformatics	(15)
	<p>A) Protein Structure Basics: Amino acids, Peptide bond formation, Ramchandran Plot, Secondary Structures, Tertiary Structures, and Determination of Protein Three-Dimensional Structure.</p> <p>B) Protein Structure Visualization, Comparison and Classification, CATH & SCOP</p> <p>C) Protein Secondary Structure Prediction, Protein Tertiary Structure Prediction: Homology Modeling</p> <p>D) GENE AND PROMOTER PREDICTION</p> <ul style="list-style-type: none"> • Gene Prediction: Gene Prediction in Prokaryotes, Gene Prediction in Eukaryotes • Promoter and Regulatory Element Prediction: Promoter and Regulatory Elements in Prokaryotes, Promoter and Regulatory Elements in Eukaryotes 	

Credit –1 UNIT III	Sequence Alignment and Molecular Phylogenetics	(15)
	<p>A) Sequence alignment: Significance of Sequence alignment, Global Alignment and local sequence alignment</p> <ul style="list-style-type: none"> • Pairwise Sequence Alignment: Dot matrix, the dynamic programming (or DP) algorithm, Word or <i>k</i>-tuple methods, Database Similarity Searching: FASTA and BLAST • Multiple Sequence Alignment: Exhaustive Algorithms, Heuristic Algorithms, iterative algorithms. <p>B) PAM matrices, BLOSSUM matrices C) Primer designing</p>	
Credit –1 UNIT IV	Phylogenetic analysis	(15)
	<p>A) Introduction: Evolution, definition of phylogenetic tree, nodes, internodes, root, tree, styles; cladogram, phenogram, curvogram, B) Steps involved in construction of phylogenetic tree C) Concept of evolutionary trees, Maximum parsimony method, Distance methods, The maximum likelihood approach, Sequence alignment based on an evolutionary model, Reliability of phylogenetic predictions, Complications from phylogenetic analysis D) Relationship of phylogenetic analysis to sequence alignment, Genome complexity and phylogenetic analysis</p>	

Student should be able to:

1. Understand concepts of various databases and various methods for the data retrieval, data storage, and data mining and use that data for the further analysis.
2. Understand gene annotation as well as submission of the sequences to the various databases.
3. apply Various bioinformatics tools and techniques and how to use that for the analysis of the biological experimental data.
4. Create phylogenetic analysis using given biological data

Reference Books:

4. Campbell, [M.A.](#) Heyer, [L.J.](#) “Genomics Proteomics & Bioinformatics” *Benjamin Cummings*. (2008)
5. Xiong, Jin. *Essential bioinformatics*. *Cambridge University Press*; (2006).
6. Griffiths, Anthony JF. Wessler, SR. Lewontin, RC, Carroll, SB (2007) “Introduction to genetic analysis” *W. H. Freeman* (2008).
7. Attwood, TK., David, J. Parry-Smith. Addison Wesley Longman Limited. (1999) ISBN 0-582-32788-1.
8. Twyman, Richard. *Principles of proteomics*. Taylor & Francis, (2004).

SEMESTER III**MBTT 304 B: BIOSTATISTICS****Objectives: Students will be able to**

- Understand the importance of Biostatistics in Life science research.
- Study of data analyses and presentation.
- Understand statistical inferences based on statistical tools and techniques.
- Understand applications of MSEXCEL.

Credits=4	SEMESTER-III MBTT 304 B: BIOSTATISTICS	No. of hours per unit/ credits
Credit –I UNIT I	Introduction to Biostatistics	(15)
	<p>A) Scope of Biostatistics, Samples & population, Types of variable, Theory of errors, measure of precision, Probable errors of function, rejection of observation Mean (Arithmetic, Harmonic, & Geometric), Median & Mode. Introduction to probability</p> <p>B) Introduction: Biological variables, parameters of statistical data display.</p> <p>C) Types of scales: linear, power, log, circular (with biological examples)</p> <p>D) Curves and Equations (Graphical & diagrammatic representation)</p>	
Credit –I UNIT II	Probability Distribution & Sampling	(15)
	<p>A) Probability Distribution & Sampling</p> <p>B) Frequency distributions: central tendency, dispersion, skewness, kurtosis</p> <p>C) Probability Distributions: binomial and Poisson</p> <p>D) Normal Distributions and applications</p> <p>E) Properties of Gaussian distributions, Central Limit theorem, Std. error and confidence limits</p> <p>F) standard deviation & standard errors</p>	

	G) Sampling Techniques: Simple Random Sampling, Systematic Sampling, Stratified Sampling, Cluster Sampling	
Credit –1 UNIT III	Hypothesis Testing	(15)
	<p>A) Hypothesis Testing (with biological examples)</p> <p>B) Principles of hypothesis testing, significance level, null hypothesis, Type I and Type II errors</p> <p>C) Examples of hypothesis testing: z-test, t-test, Chi-square test</p> <p>D) ANOVA</p> <p>E) Regression and Correlation:- Linear and Multiple regression analysis</p> <p>F) Mathematical models</p> <p>G) Concept of models: growth and decay, population interactions, optimization, Equilibrium solutions, Analytical solutions, numerical solutions and simulation.</p>	
Credit –1 UNIT IV	Application Software	(15)
	<p>A) Introduction to MSEXCEL-Use of worksheet to enter data, edit data, copy data, move data.</p> <p>B) Use of in-built statistical functions for computations of Mean, S.D., Correlation, regression coefficients etc.</p> <p>C) Use of bar diagram, histogram, scatter plots, etc. graphical tools in EXCEL for presentation of data.</p> <p>D) Introduction to MSWORD word processor editing, copying, moving, formatting, Table insertion, drawing flow charts etc.</p>	

Learning outcomes:

Student should be able to:

- Analysis and presentation of data
- Draw inferences based on statistical tools and techniques.
- design an experiment
- Use MSEXEL for data processing and graphical arrangements.

SEMESTER III**MBTP 305****PRACTICAL COURSE – Bioprocess and Fermentation Technology & Enzymology****Course Objectives:** Student will be able to:-

1. study concept of Bioreactor.
2. understand the digital monitoring in fermentation.
3. study concept upstream and downstream processing
4. understand the lab fermentation to scale up

Credits=2	SEMESTER-III MBTP: PRACTICAL COURSE – MBTP 305: Bioprocess and Fermentation Technology & Enzymology	No. of hours per unit/ credits
Credit –I UNIT I	Bioprocess and Fermentation Technology	
	<ol style="list-style-type: none"> 1. Screening and identification (Genus Level) of a production strain (enzyme/antibiotic) from soil samples 02 2. Maintenance of the isolated production organism (Agar slants/ glycerol stocks /soil culture/ lyophilization) at least two methods. 02 3. Optimization of different parameters of the isolated organism (conventional and Statistical design). 02 4. Inoculum buildup of the isolated organism for use in bench top fermentation 01 5. Study of Working of lab bench fermenter (with production of enzyme or antibiotic using screened organism) 01 6. Study of different parts and assembly of the bench top fermenter. 01 7. Assay of product formed (Bioassay or Enzyme assay). 01 8. Solid state fermentation: Lab scale production of a product. 02 9. Demonstration of working of industrial fermenters by visiting fermentation industry 01 	

Credit –1 UNIT II	Enzymology	
	1. Detection of some common enzymes	01
	2. Extraction and Isolation of enzyme (amylase/protease/peroxidase/catalase)	01
	3. Study of enzyme activity	01
	4. Study of specific activity	01
	5. To Asses effect of pH on enzyme activity.	01
	6. 5. To Asses temperature stability of the enzyme.	01
	7. To Asses effect of substrate conc. (V_{max} and K_m) on enzyme activity	01
	8. To Asses effect of activator on enzyme activity.	01
	9. To Asses effect of inhibitor on enzyme activity.	01
	10. Study of enzyme immobilization.	01

Course Outcome: Student should be able to:-

1. Understand the digital monitoring in fermentation.
2. Understand the lab fermentation to scale up
3. Isolation & purification strategies of enzyme
4. Effects of different environmental factors on enzyme activity

SEMESTER III

MBTP 306

PRACTICAL COURSE – MBTP 306: EXERCISES IN GENETIC ENGINEERING AND BIOINFORMATICS

Learning Objectives: Students will be able to

- Isolate plasmid
- understand the concept of gene transformation in prokaryotes.
- understand the process of hybridization techniques.
- Study the technique of electrophoresis

Credits=2	SEMESTER-III MBTP: PRACTICAL COURSE – MBTP 306: Exercises In Genetic Engineering And Bioinformatics	No. of hours per unit/ credits
Credit –I UNIT I	Genetic Engineering	
	<ol style="list-style-type: none"> 1. Isolation of Plasmid DNA 02 2. In vitro DNA ligation 01 3. Restriction mapping 01 4. Transformation of <i>E. coli</i> 02 5. Southern blotting and hybridization 02 6. Northern and dot blotting technique 02 7. Isolation of cytoplasmic RNA 01 8. Electrophoresis of RNA on denaturing gels 01 9. RFLP 01 10. Polymerase Chain Reaction and analysis by agarose gel electrophoresis 01 	
Credit –1 UNIT II	Bioinformatics	
	<ol style="list-style-type: none"> 1. Using the NCBI and Uniprot web resources. 01 2. Sequence information resource: Using NCBI, EMBL, Genbank, Entrez, Swissprot/ TrEMBL, UniProt. 02 3. Similarity searches using tools like BLAST and interpretation of results. 01 4. Multiple sequence alignment using ClustalW. 01 5. Phylogenetic analysis of protein and nucleotide sequences. 01 6. Use of gene prediction methods (GRAIL, Genscan, Glimmer). 01 7. Using RNA structure prediction tools. 01 	

	8. Use of various primer designing and restriction site prediction tools. 01	
	9. Use of different protein structure prediction databases (PDB, SCOP, CATH). 01	
	10. Construction and study of protein structures using Deepview/PyMol/RasMol. 01	
	11. Homology modelling of proteins. 01	
	OR Biostatistics	
	1. Measures of Central Tendency and Dispersion 02	
	2. Statistical Analysis using EXCEL. (Descriptive statistics and graphical presentation) 02	
	3. Sketching of pmf/pdf of Binomial, Poisson and Normal distributions. 02	
	4. Correlation and Regression Analysis 01	
	5. Simple random sampling and stratified sampling. 01	
	6. Hypotheses testing and confidence intervals. 02	
	7. Analysis of Variance 01	
	8. Word processing. 01	

Learning Outcomes:

Student should be able to

- understand probe, hybridization, and electrophoresis.
- understand the RNA isolation and denaturing gel electrophoresis.
- Carry out the analysis of sequence
- develop the structures of proteins and nucleic acids using suitable tools

7. Griffiths, Anthony JF. Wessler, SR. Lewontin, RC, Carroll, SB (2007) "Introduction to genetic analysis" *W. H. Freeman* (2008).

SEMESTER IV
MBTT 401: GENOMICS AND PROTEOMICS

Objectives: Students will be able to

- Study the fundamental of genome organization, genomics and the techniques used for the analysis of genomic data.
- study DNA and RNA microarray techniques with the applications in basic research.
- Understand the protein and protein purification strategies.
- Study the protein identification techniques like 1D and 2D gel electrophoresis; Protein analysis techniques like MALDI-TOF and microarray.

Credits=4	SEMESTER-III MBTT 401: GENOMICS AND PROTEOMICS	No. of hours per unit/ Credits
Credit –I UNIT I	Genomics	(15)
	A) Genomics and Proteomics overview, omes and omics, Concepts and applications B) Genome overview at the level of Chromosome (with model organisms example); Strategies for large scale DNA sequencing- Whole genome analysis techniques, Next generation sequencing methods; Organization, structure and mapping of genomes (with model organisms example) C) Comparative genomics - Goals, bioinformatics of genome annotation, methods and limitations D) Structural genomics –Goals, methods, applications E) Functional genomics –Goals, methods, applications	
Credit –I UNIT II	Transcriptomics and Microarray and Applications	(15)
	A) Introduction to transcriptomics and expression profiling B) DNA and RNA Microarray– Preparation, working and analysis. Microarray databases and bioinformatics tools	

	<p>C) Investigative techniques –EST, SAGE, SNP</p> <p>D) Applications in basic research and medical genetics, Metagenomics, Toxicogenomics, Pharmacogenomics, Gene disease association.</p>	
Credit –1 UNIT III	Proteins and Proteomics	(15)
	<p>A) Introduction, Concept, application, advantages and limitations of Expressional Proteomics, Functional Proteomics, Structural Introduction of proteins and proteomics, types of proteins, protein folding and misfolding and diseases, Anfinsen’s experiment,</p> <p>B) protein purification strategies: steps in protein purification (Lysis, fractionation, protein solubilization, protein precipitation, protein quantification)</p> <p>C) Methods of protein purification (Column based).</p> <p>D) Proteomics-with at least one explanatory example for each.</p> <p>E) Applications of Peptidomics/Drug discovery, Toxicoproteomics, Biomarkers in disease diagnosis, Identification and characterization of novel proteins</p>	
Credit –1 UNIT IV	Techniques in Proteomics	(15)
	<p>A) Strategies in protein identification, Polyacrylamide gel electrophoresis (PAGE), 2D Gel electrophoresis, Isoelectric Focusing (IEF), staining methods for 1D and 2D PAGE.</p> <p>B) Mass spectrometry in proteomics –</p> <p>C) Principle, techniques, components and variations (HPLC, ESI, MALDITOF, FT-MS, MS/MS, Quadrupole) and analysis, applications</p> <p>D) Protein- Protein interactions- experimental and computational- two hybrid, Phage display;</p> <p>E) Protein Microarray- Preparation, working and analysis. Proteomics and Microarray databases and allied bioinformatics</p>	

	tools	
--	-------	--

Learning Outcomes:

Students should be able to

- learn recent advances in genomics and proteomics.
- acquire knowledge about tools and techniques used in genomics and proteomics research.
- understand concept and applications of gene expression studies
- learn and apply the techniques of proteomics.

SEMESTER IV

MBTT 402: RESEARCH METHODOLOGY AND CLINICAL RESEARCH

Learning Objective:

Students will be able to

- Study the skills of basics of research
- Understand defining research problems
- Understand concepts of how research is done.
- Study skills & knowledge in understanding standard operating procedures and good clinical practices.

Credits=4	SEMESTER-III MBTT 402: RESEARCH METHODOLOGY AND CLINICAL RESEARCH	No. of hours per unit/ Credits
Credit –I UNIT I	Introduction	(15)
	A) Meaning of Research, Objectives of Research, Types of Research, Research Approaches, Significance of Research, Research Methodology, Research and Scientific Method B) Defining the Research Problem: i. What is a Research Problem, ii. Selecting the Problem, iii. Necessity of Defining the Problem, iv. Technique Involved in Defining a Problem	
Credit –I UNIT II	Research Design	(15)
	A) Meaning of Research Design, Need for Research Design, Features of a Good Design, Important Concepts Relating to Research Design, Basic Principles of Experimental Designs B) Sampling Design i. Census and Sample Survey, ii. Implications of a Sample Design, iii. Steps in Sampling Design,	

	<ul style="list-style-type: none"> iv. Criteria of Selecting a Sampling Procedure, v. Characteristics of a Good Sample Design, vi. Different Types of Sample Designs, vii. How to Select a Random Sample, Random Sample from an Infinite Universe 	
Credit –1 UNIT III	Introduction to clinical research and Drug Development Process	(15)
	<ul style="list-style-type: none"> A) Overview of Drug Development Process B) Briefing of clinical trials phases C) Protocol and clinical trial Designing: <ul style="list-style-type: none"> i. Definition of protocol, its importance and purpose ii. Protocol format: Chapters (Headings) and broad contents of protocol, Important scientific and administrative aspect included in protocol, iii. Introduction to Research Methodology, iv. Protocol writing team and role of each member, v. Clinical trial design: Types of study designs, vi. Sampling, vii. sample size, viii. randomization, ix. Inclusion & Exclusion criteria, x. Phases of clinical trial & Types of trials. 	
Credit –1 UNIT IV	Good Clinical Practice (GCP) ICH regulations	(15)
	<ul style="list-style-type: none"> A) Ethical Principles and their origin, Ethics in clinical research: As per ICMR & GCP, <ul style="list-style-type: none"> i. Ethics committees: Roles & responsibility of IEC and IRB, ii. Ethics in relation to vulnerable groups & special situations, iii. Responsibilities of Sponsors, Investigators & Regulators, B) ICH: Purpose, regulations & guidelines, Informed consent and Informed consent form, Essential Documents 	

	<p>C) Drug Regulatory Affairs (Clinical Trial):</p> <ol style="list-style-type: none"> i. Regulatory Authority in India (DCGI & CDSCO), ii. Schedule Y of Drugs & Cosmetics Act, iii. International Scenario of Regulatory Aspects: FDA, CFR 	
--	---	--

Learning Outcome:

Students should be able to

- Acquire knowledge about defining research problems
- Understand Good Clinical Practices, Good Manufacturing Practices, GCP/ GMP
- Understand Drugs and Cosmetics Acts.
- Understand Importance of Pharmacovigilance.

SEMESTER IV

MBTT 403: BIO-ENTREPRENEURSHIP AND IPR

Objectives:

Students will be able to

- Understand the dynamic role of entrepreneurship and small businesses
- Study Business Plan Creation
- Study IPR and patent laws.
- understand IPR regulations with special reference GMO.

Credits=4	SEMESTER-III MBTT 403: BIO-ENTREPRENEURSHIP AND IPR	No. of hours per unit/ Credits
Credit –I UNIT I	An Overview of Entrepreneurs and Entrepreneurship:	(15)
	A) An Overview of Entrepreneurs and Entrepreneurship: definition, B) Basic principles and practices of management- Definition, concepts and application; Organization types, coordination, control and decision making in management C) Characteristics for being an entrepreneur in biotechnology, Case studies of successful and unsuccessful bio-entrepreneurs D) Core concept of Market: Identification and evaluation of market potential of various bio-entrepreneur sectors. E) Marketing, Marketing research- concept and techniques	
Credit –I UNIT II		(15)
	A) Types of Enterprises and Ownership Structure: small scale, medium scale and large scale enterprises, role of small enterprises in economic development; proprietorship, partnership, Ltd. companies and co-operatives: their formation, capital structure and source of finance. B) Projects: identification and selection of projects; project report: contents and formulation, concept of project evaluation, methods of project evaluation: internal rate of return method and net present value method.	

	<p>C) Role of government and schemes, financial institutions in fostering bioentrepreneurship</p> <p>D) Factors affecting biotech business: (finance, infrastructure, equipment, manpower, resources, project location, end product, quality issues, etc)</p>	
Credit –1 UNIT III	Characteristics and Types of Intellectual Properties Tools of IPR	(15)
	<p>A) Introduction and types, Treaties, Conventions, Laws, Acts, agreements pertaining to Biotechnology, Tools of IPRs</p> <p>B) Patents- prerequisites for patenting, Biological Patents –</p> <ol style="list-style-type: none"> i. a. Plant b. Animal c. Microbial patents ii. Process patents and Product patent with one case study each. iii. Indian and International scenario, Protection of Plant varieties and Plant breeders rights, Industrial Designs- Designs of gadgets used in Biotechnology. 	
Credit –1 UNIT IV		(15)
	<p>A) Biosafety and Societal Concern, Public debate and concern on genetically modified microorganisms, plants and animals, scientific analyses of the concern,</p> <p>B) Biosafety regulation and guidelines on developing and using the genetically modified organisms.</p> <p>C) Patenting of Biological Materials: International conventions. International cooperation, obligations with patent applications, Can live form be patented- with special reference to Factor VIII, Erythropoietin, tissue plasminogen, hybridoma technology etc. Patenting of higher plants, animals, genes, DNA sequences, transgenic organisms</p>	

Learning Outcomes:

Students should be able to

- understand fundamentals of Management and Administration.
- understand Legal forms of the business for registration of the small scale industries, agencies for the registration of the companies
- prepare the business plan
- understand IPR and patent rules and copyright act.

SEMESTER IV

MBTT 404A: ANIMAL BIOTECHNOLOGY

Learning objective:

Students will be able to

- study concept of animal cell line, their establishment and subculture.
- understand different media required for animal cell culture.
- Study concepts of concept of organogenesis.
- understand the concept of stem cell and various animal models.

Credits=4	SEMESTER-III MBTT 404A: ANIMAL BIOTECHNOLOGY	No. of hours per unit/ Credits
Credit –I UNIT I	Introduction to tissue culture:	(15)
	A) Definition, principle and significance of tissue culture, Maintenance of sterility and use of antibiotics, Detection of Mycoplasma and viral contaminants. Prevention of Cross contamination Logic of formulation of tissue culture media: natural, synthetic media, and sera. B) Sterilization of cell culture media and reagents. Introduction to the balance salt solutions and simple growth medium. C) Role of carbon dioxide in animal cell culture. Various systems of tissue cultures with distinguishing features, advantages and limitations. D) Methodology: i. Primary culture: Behavior of cells, properties, utility with different examples ii. Explant culture, iii. Suspension culture. E) Cell lines: Definition, establishment and maintenance. F) Normal and established cell lines: Their characteristic features and utility, Characteristics of cells in culture.	

Credit –I UNIT II	Organ culture:	(15)
	<p>A) Methods, behavior of organ explant, and utility of organ culture, Histotypic and organotypic cultures. Growth studies: Cell proliferation, cell cycle, mitosis in growing cells.</p> <p>B) Freeze storing of cells and transport of cultures, Measurement of viability and cytotoxicity.</p> <p>C) Cell cloning and types of cloning, cell synchronization, micromanipulation, Cell transformation. Separation of cell types: Various methods: advantages and limitations;Flow cytometry.</p> <p>D) Nuclear transplantation, Cell hybridization, Transfection studies. Growing cells in serum free media, scaling up.</p> <p>E) Propagation of viruses (viral sensitivity of cell lines).</p> <p>F) Application of animal cell culture for <i>in vitro</i> testing of drugs, in production of human and animal viral vaccines and pharmaceutical proteins.</p>	
Credit –1 UNIT III	Stem cells	(15)
	<p>A) Stem cells – adult, embryonic, induced pluripotent stem cells: Concept, principles for identification, purifications, assessment of proliferation long-term maintenance and characterization.</p> <p>B) Overview-livestock breed and their productivity, artificial breeding methods and hazards, marker assisted breeding of livestock,</p>	
Credit –1 UNIT IV	Transgenic animals	(15)
	<p>A) Transgenic animals: artificial breeding – in vitro fertilization and embryo transfer technology, artificial insemination, germ cell storage</p>	

	<p>B) Genetic modifications – methods, transgenic fish and mammals (Mice)</p> <p>C) Gene targeting: Targeted gene transfer. Mouse models for human, genetic disorders, Knockout mice, Study of animal models (Mice)</p>	
--	---	--

Learning outcome:

The student should be able to:

- Understand Concept and different types in animal culture.
- perform molecular biology techniques genetically engineer the animal to improve sustainability, productivity and suitability for pharmaceutical, agriculture and industrial applications.
- Understand Concept and different types in animal culture.
- Use of molecular biology techniques genetically engineering the animal to improve sustainability, productivity, and suitability for pharmaceutical, agriculture and industrial applications.

SEMESTER IV

MBTT 404 B: FOOD BIOTECHNOLOGY

Learning Objective:

Students will be able to

- Study different methods of food processing.
- Understand of food preservation techniques.
- study different quality control aspects. GMP & GLP guidelines
- understand food standards laws and legislations.

Credits=4	SEMESTER-III MBTT 404 B: FOOD BIOTECHNOLOGY	No. of hours per unit/ Credits
Credit –I UNIT I	Food processing:	(15)
	A) Starter cultures and their biochemical activities; production of alcoholic beverages; production of Single cell protein and Baker’s yeast; Mushroom cultivation B) Food and dairy products: Cheese, bread and yogurt. C) Fermented vegetables – Saurkraut; Fermented Meat – Sausages	
Credit –I UNIT II	Food preservation:	(15)
	A) Food preservation by heating: drying, osmotic dehydration, blanching, canning, pasteurization, B) Sterilization, extrusion cooking. C) Non-thermal preservation: Hydrostatic pressure, dielectric heating, microwave processing, hurdle technology, membrane technology, irradiation. D) Food preservation by low-temp: Refrigeration, freezing and freeze-drying.	
Credit –1 UNIT III	Quality assurance:	(15)

	<p>A) Microbiological quality standards of food,</p> <p>B) Intellectual property rights and animal welfare, Government regulatory practices and policies. FDA, EPA, HACCP, ISI</p> <p>C) Risk analysis; consumer and industry perceptions</p>	
Credit –1 UNIT IV	Food standards and laws:	(15)
	<p>A) International – Concept of Codex alimentarius, HACCP, GMP, GHP, USFDA, ISO 9000, ISO 22000, ISO 14000.</p> <p>B) National – Introduction of BIS/IS, Food Safety and standards – 2006, Food Safety and standard regulation 2010, FPO, MPO, MMPO, Agmark.</p> <p>C) Prevention of food adulteration Act: Food Adulteration:</p> <ol style="list-style-type: none"> i. Definition ii. Common adulterants in different foods iii. Contamination, methods of detection. <p>D) Food additives and legislation;</p> <ol style="list-style-type: none"> i. Coloring matter ii. preservatives iii. poisonous metals iv. antioxidants and emulsifying and stabilizing agents v. Insecticides and pesticides. <p>E) PFA specification for food products, Nutritional labeling</p>	

Learning Outcomes:

Students should be able to

- Understand the different methods of food processing.
- apply of food preservation techniques.
- acquire knowledge of different quality control aspects.

- understand food standards and laws.

MBTP 405: PROJECT

4 Credits

Learning Objectives:

Students will be able

- understand of experiment designing
 - study literature review
 - write research proposal and projects
1. Selection of the Project topic and allotment of project supervisor.
 2. Preparation of Project Execution Plan : Time and Resource Allocation
 3. Guidance by the Project Supervisor, for the self-study of relevant course topics and concepts by the student.
 4. Self-study and reference work of relevant topics and concepts by the student.
 5. The Project Work must involve practical work(wet lab.) related to selected discipline
 6. Students are expected to work on “Project Work” for about 10 periods per week.
 7. The project work must be allotted individually.
 8. The student invests his energy, time and resources in a project. The project therefore should, if possible, have important bearing on some practical aspect. This will help student to justify his efforts on project.
 9. It is the joint responsibility of student and project supervisor to maintain daily registerbook of his/her project work and has to be produced at the time of examination if asked.
 10. Submission Process: Student should prepare 2 copies of the Project Report. At the beginning, the respective Project Supervisor must approve both copies positively before final examination. Then respective Head or Coordinator approves both copies of the Project Report.
 11. The student has to submit one of these approved copies of project report, duly signed by the project Supervisor and Principal, before practical examination. The report will be assessed by both Internal examiner (The project supervisor), who will assign the marks out of 30 and the external examiner (appointed by university), who will assign marks out of 140, Thus the total will be out of 170 marks. Theory, practical and project report shall form separate heads of passing.

Learning outcomes:

Students should be able to

- acquire the practical knowledge of experiment designing.
- review available literature on a particular topic.
- write research proposal and projects

MBTP 406: Internship

4 Credits

Learning Objectives:

Students will be able to

- understand the industrial environment, which cannot be simulated in the classroom and hence creating competent professionals for the industry.
- learn, understand, and sharpen the real time technical / managerial skills required at the job.
- study the current technological developments relevant to the subject area of training.

Guidelines:

Internships may be full-time or part-time; they are full-time in the summer vacation and part-time during the academic session. Curriculum is flexible to adjust internship duration. Therefore, opportunities must be provided for experiences that cannot be anticipated when planning the course. The institutes have the flexibility to schedule internship, Project work, Seminar etc. according to the availability of the opportunities. However, minimum requirement regarding Internship duration is three weeks.

During the vacation after 2nd and/or 3rd semester, students are ready for industrial experience. Therefore, they may choose to undergo Internship / Innovation / Entrepreneurship related activities. Students may choose either to work on innovation or entrepreneurial activities resulting in start-up or undergo internship with industry/ NGO's/ Government organizations/ Micro/ Small/ Medium enterprises to make themselves ready for the industry.

Every student is required to prepare a file containing documentary proofs of the activities done by him. The evaluation of these activities will be done by Programmed Head/Cell In-charge/ Project Head/ faculty mentor or Industry Supervisor as specified in evaluation scheme.

General Procedure:

Step 1: Upon request of student, request Letter/ Email from the department should go to industry to allot various slots of 3-6 weeks during vacation as internship periods for the students. Students request letter/profile/ interest areas may be submitted to industries for their willingness for providing the training.

Step 2: Industry will confirm the training slots and the number of seats allocated for internships via Confirmation Letter/ Email. In case the students arrange the training themselves the confirmation letter will be submitted by the students in the department. Based on the number of slots agreed to by the Industry, department will allocate the students to the Industry. In addition, the internship slots may be conveyed through Telephonic or Written Communication (by Fax, Email, etc.) by Faculty members who are particularly looking after the Internship of the students.

Step 3: Students on joining Training at the concerned Industry / Organization, submit the Joining Report/ Letters / Email.

Step 4: Students undergo industrial training at the concerned Industry / Organization. In-between Faculty Member(s) evaluate(s) the performance of students once/twice by visiting/ coordination with the Industry/Organization and Evaluation Report of the students is submitted in department office.

Step 5: Students will submit training report after completion of internship.

Step 6: Training Certificate to be obtained from industry.

Step 7: Presentation along with brief report on training to be given at the time of examination for final evaluation.

Learning outcomes:

Students should be able to

- get exposure to the industrial environment becoming competent professionals for the industry.
- learn, understand and sharpen the real time technical / managerial skills required at the job.
- Acquire to the current technological developments relevant to the subject area of training.
